DIGITAL SAFETY

Personal digital protection, with a real person to call.

90-DAY PILOT CONCEPT

Limited to five households

WHY THIS MATTERS

Scams now arrive as convincing bank calls, family emergencies, fake invoices, malicious links, and fraudulent technical-support warnings. One mistake can expose a household's savings, identity, accounts, photographs, and important records.

WHAT THE PILOT INCLUDES

- Remote household cybersecurity assessment
- Review of up to three approved devices
- Security, update, firewall, and encryption checks
- Password-manager, MFA, and passkey guidance
- Backup setup and recovery-readiness review
- Personalized scam-recognition session
- Monthly device-security checkups
- Known support number for suspicious messages, calls, links, and pop-ups
- Written household security and recovery plan
- One 30-minute scheduled support session each month

FOR ADVISOR PARTNERS

A protective benefit built on trust

Advisors may introduce appropriate clients, sponsor education or checkups, and offer optional protection upgrades. No balances, passwords, or private financial records are needed. All arrangements remain subject to firm compliance.

THE PROMISE

We help clients secure their devices and important accounts, prepare for fraud or data loss, and reach a trusted person when something suspicious happens.

HOW SUPPORT WORKS

Clients call a known number or use a scheduled appointment. Remote access is never requested through an unexpected call. The client verifies the technician and approves each attended support session.

Our safety rule

We never request gift cards, cryptocurrency, money transfers, banking passwords, or one-time banking codes. We do not enter financial accounts or authorize transactions.

PROPOSED PILOT PRICING

\$249 initial security setup

\$59 per month during the pilot

CLEAR BOUNDARIES

The service reduces risk and improves recovery readiness; it cannot guarantee that fraud, malware, identity theft, or data loss will never occur. General technology support, onsite work, forensic investigation, and incident recovery are separately scoped.

Next step

Review with the advisor, confirm compliance requirements, and identify five interested households.
